TRANSTHORACIC ECHOCARDIOGRAM (TTE)

Narrative 2023-04-04T16:28:00.000

Transthoracic Echo Report

Pat.Name: RICHARDS, PAULETTE Pat.ID: 3808523

St.Date: 4/4/2023 Refer.MD: COUN, DAVID

Exam Time: 4:28:00 PM Study Type:TTE - Transthoracic Echo

Height: 66in Weight: 169.65lb

BSA: 1.87 m2 DOB Age: 9/22/1953,69Y

Sex: FEMALE BP: 132/80

Sonogrphr: Medina,Jannine RCS ICD - 9: R06.02

Reason for Study:Shortness of breath

Procedures: TTE - Rest Only D+C, Complete, w/o contrast

Visit ID: 100128221270

SUMMARY:

Left ventricle: Normal left ventricular size. Normal left ventricular systolic function. The estimated left ventricular ejection fraction is 58%. Basal septal hypertrophy. No regional wall motion abnormalities are seen. Diastolic parameters are normal.

Right ventricle: Normal right ventricular size. Normal right ventricular function.

Left atrium: Normal left atrial size. Negative bubble study. Atrial septal aneurysm.

Right atrium: Normal right atrial size.

Mitral valve: Structurally normal mitral valve. Trace mitral regurgitation.

Aortic valve: Structurally normal aortic valve without stenosis. Trace aortic regurgitation.

Tricuspid valve: Structurally normal tricuspid valve. Trace tricuspid regurgitation. Estimated pulmonary artery systolic pressure is 22 mmHg.

Pulmonic valve: Structurally normal pulmonic valve. Trace pulmonic regurgitation.

Pericardium: No pericardial effusion.

Aortic root: Normal aortic root size.

Miscellaneous: IVC is normal sized. IVC shows >50% collapse consistent with normal RA pressures.

Conclusion

Normal left and right ventricular size and function.

Basal septal hypertrophy.

Normal diastolic function.

Normal biatrial size.

Trace aortic regurgitation.

Atrial septal aneurysm.

Negative bubble study.
